Supporting people in Norfolk and Waveney to be more active

Referral Guide

Falls and Frailty

What is Active NoW?

Active NoW enables health and care professionals to refer patients and clients for exercise and physical activity.

A central co-ordination centre identifies suitable activity through a personalised triage service. The programme which launched January 2023, has since expanded to encompass those who are at risk of a fall. The aim is to:

- Provide your patients and clients with a range of activities.
- Tailor a programme based on their level of mobility and need.
- Support your patients and clients with their movement journey.

Who is it for?

Active NoW is aimed at inactive patients who do less than 30 minutes of moderate intensity exercise each week. Patients must be categorised as 3, 4 or 5 on the Rockwood Frailty Scale.

Who can refer?

Both clinical and non-clinical professionals can refer people into a falls-related activity. If however, a person is identified as having a long-term health condition, the referral may need to be escalated to a healthcare professional with access to patient records. If the individual needs clinical sign-off, they will be made aware and advised on the process.

Are self-referrals accepted?

Self-referrals are not currently available, but we hope to explore self-referrals in the future.

How does it work?

Referrals can be made within SystmOne/EMIS or made using the Active NoW Online Referral Form.

Both healthcare professionals and non-clinical professionals are eligible to make a falls-related referral to Active NoW.

Identify

If your patient is categorised as 3, 4 or 5 on the Rockwood Frailty Scale they may be eligible for an Active NoW referral.

Rockwood Frailty Scale

Triage and assessment

Our expert team will assess and triage the referred patient via an outgoing phone call, working with them to identify their needs and the most appropriate physical activity opportunity for them.

Physical Activity Programme

The referral will be shared with the agreed physical activity provider who will contact the patient to arrange a start date and baseline assessment.

Evaluation

Some providers will use functional fitness test exercises to measure individual progress, and the Active NoW team will circulate a survey to the patient after 6 months to evaluate the programme.

Why increase activity levels?

Frail, inactive people have much to gain from increasing physical activity levels and building strength and balance, including those with osteoporosis.

Even small improvements in strength and balance can reduce an individual's risk of falling and improve their confidence.

Benefits

Reduces risk of falling and progression of frailty

Increased muscle strength

Faster walking speed

Improves ability to perform daily activities

Improves cognition, studies show exercise may slow down mental decline

Improves functional ability

Reduces fall-rate ability fractures

Improves balance

How to discuss?

Initiating a conversation about physical activity in a non-judgemental and respectful manner can help maintain the individual's active participation in the discussion and decision-making process.

Talking to patients and clients

- Most individuals don't necessarily see themselves as being susceptible to falls, so tailor the language and terminology you use to discuss physical activity.
- Discuss the wider benefits to physical activity such as overall wellbeing and social interactions.
- Have engaging, comfortable conversations that increase patients' confidence.
- Help people find motivation by understanding what matters to them in maintaining a social and active lifestyle.

Conversation starters

- Would it be OK to spend a minute talking about something that many patients who have mobility problems find helpful?
- Have you considered how physical activity might aid you in maintaining a social and active lifestyle?
- Many people find that moving more helps them manage their condition and symptoms, as well as improving their general wellbeing. I wonder what you make of that?
- Would you be interested in talking a little more about how physical activity might help with your health and wellbeing?

Programme Offer

The Active NoW team is continually expanding our list of services to which we can refer or provide information to patients or clients. We offer a range of activity options as part of the programme, although the availability of these choices depends on the individual's district of residence and their specific needs.

- **Community Classes:** Individuals may receive referrals for community-based activities, including parkrun, well-being walks, and exercise sessions led by local providers.
- **1-2-1 Home Visits:** In select areas, personalised sessions are provided through home-based visits.
- **Online Resources:** Individuals will also receive the opportunity to utilise digital assets, including the exercise referral app known as EXI. EXI brings together exercise science, behaviour modification techniques, data presentation, and motivators to provide secure, tailored physical activity recommendations that individuals are more likely to adhere to.
- **Leisure Operators:** Exercise referral schemes are accessible through leisure operators in every council district. These schemes encompass either exercise referral classes or supervised gym access facilitated by an exercise referral instructor. This option generally grants access to all other amenities at the centre.

Cost

The cost for Active NoW patients or clients will differ based on the chosen option. Typically, the activities will be free or at a significant discounted rate.

Testimonials and Quotes

Read below what health and care professionals have said about the Active NoW service.

Wellbeing Service

“I think the scheme is really helpful for our patients who just need that motivation and extra assistance.”

East Coast Community Healthcare CIC

“The referral form is a breeze to use and doesn’t take up too much clinical time, which is crucial to clinicians.”

East Coast Community Healthcare CIC

“The referral process is very clear and easy to follow. It is easy to contact the Active NoW team directly to discuss any issues.”

Start Referring NoW

Referrals can be made within SystmOne/EMIS to prevent the need for clinicians to manually input patient data. In addition, referrals can also be made using the Active NoW Online Referral Form. Scan the QR code to get started.

Resources are available to help you to promote the service to your patients and clients. Scan the QR code below.
